EDUCATION

New York University

M.S. in Computer Engineering

Zhengzhou University

B.S. in Computer Science GPA: 3.78/4.0

New York, NY

Sep. 2024 - Dec. 2026 (*expected*)

Zhengzhou, China

Sep. 2020 - Jul.2024

EXPERIENCE

Quanta Computer

May.2026 - Present

Software Engineer Intern

Nashville, TN

- Developed a production test monitoring and repair tracking platform for **NVIDIA GB300 servers**, centralizing test status, error codes, repair progress, and escalation records; reduced manual lookup and cross-system reconciliation.
- Built **Python/Flask REST APIs** to integrate real-time and historical production test data and connect failures with troubleshooting procedures and technician repair records, reducing diagnosis and repair-logging time by 35%.
- Developed a repair analytics module to identify recurring failures and evaluate repair effectiveness, improving the diagnosis and repair success rate by 26% and reducing repeat repairs by 14%.
- Implemented a role-based collaboration and escalation workflow with task assignment, real-time status tracking, and ticket-based communication, reducing cross-team handoff time by and minimizing duplicate troubleshooting.

Microsoft

Sep.2025 – Dec.2025

Software Engineer Intern

Beijing, China

- Contributed to the development and quality engineering of an internal talent management platform serving 10,000+ users, improving the reliability of core business workflows and production releases.
- Independently designed a **multithreaded** automated data generation engine to validate core platform workflows, reducing test-case generation and environment setup time by 90% while generating 6,000+ complex records per execution.
- Expanded and maintained API, web, and mobile test automation using **REST Assured**, **Selenium**, **Appium**, **TestNG**, **JUnit**, and **Cucumber**, supporting 5,000+ test cases; increased API test pass rate from 86.3% to 98.9% and improved validation efficiency by 40%.
- Partnered with product managers and frontend/backend engineers in 10+ technical reviews to identify architectural risks, refine system requirements, and deliver multiple production releases with zero critical post-release defects.

Siemens

May.2025 – Sep.2025

Software Engineer Intern

Chengdu, China

- Contributed to the development and optimization of an internal **JIT** inventory management system, supporting 500+ users and processing 100,000+ supply chain records to improve factory-side supply efficiency by 80%80%.
- Designed and developed an inventory management module with role-based access control, data import/export, and automated email notifications, streamlining inventory operations for internal teams and external vendors.
- Integrated multi-platform supply chain data through **Snowflake** and implemented data processing and system interfaces to improve inventory data accessibility, consistency, and operational efficiency.
- Delivered the module through a GitLab **CI/CD** workflow covering build, testing, quality and security checks, container image publishing, and **AWS** backup while collaborating with Finance, IT, and Supply Chain teams to ensure timely delivery.

YourBookTeam

Dec.2024 - Mar.2025

Software Engineer Intern

New York, NY

- Led the front-end development of promotional and campaign pages using **HTML**, **CSS** and **JavaScript**, optimizing responsive design and performance; generated 10,000+ page views and increased conversion by 22% YoY.
- Acted as project lead in the development of a new book campaign landing page, collaborating closely with the design and sales teams to translate marketing goals into functional UI components and ensure on-time deployment.

PROJECTS

Air Quality Analysis (NYU Data Science Bootcamp) | **MATLAB, Python, NumPy, Pandas** Mar.2025 - May.2025

- Analyzed an India air-quality dataset using MATLAB, Pandas, and NumPy; applied time-series decomposition, K-means clustering, rolling-window smoothing, and correlation analysis to identify regional and temporal pollution patterns.

Full-Stack Note Management Application | **React,Node.js, MongoDB** Mar.2024 - Jun.2024

- Built a full-stack note-taking web app with complete CRUD functionality using React,Node.js, and MongoDB.
- Implemented backend services with Node.js + Express and designed RESTful APIs; used MongoDB for persistent data storage and Axios for client-server communication.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, C/C++, C#, SQL, HTML/CSS, Bash, R

Core CS: Data Structures & Algorithms, OOP, Multithreading, Distributed Systems, Problem Solving, Code Review

Web Development: Web Applications, React, Node.js, Express, REST APIs, MongoDB, MySQL, Snowflake, Redis

Cloud & DevOps: AWS, Git, GitLab, Bitbucket, Jenkins, Maven, CI/CD, Unix/Linux, Ansible, Artifactory

Testing & AI Tools: Selenium, Appium, Playwright, REST Assured, Cucumber, TestNG, JUnit, NUnit, MSTest, API Testing, UI Testing, Unit Testing, Integration Testing, Regression Testing
